Project Progress

In the first week and tried to make myself comfortable with the Ruby on Rails framework.
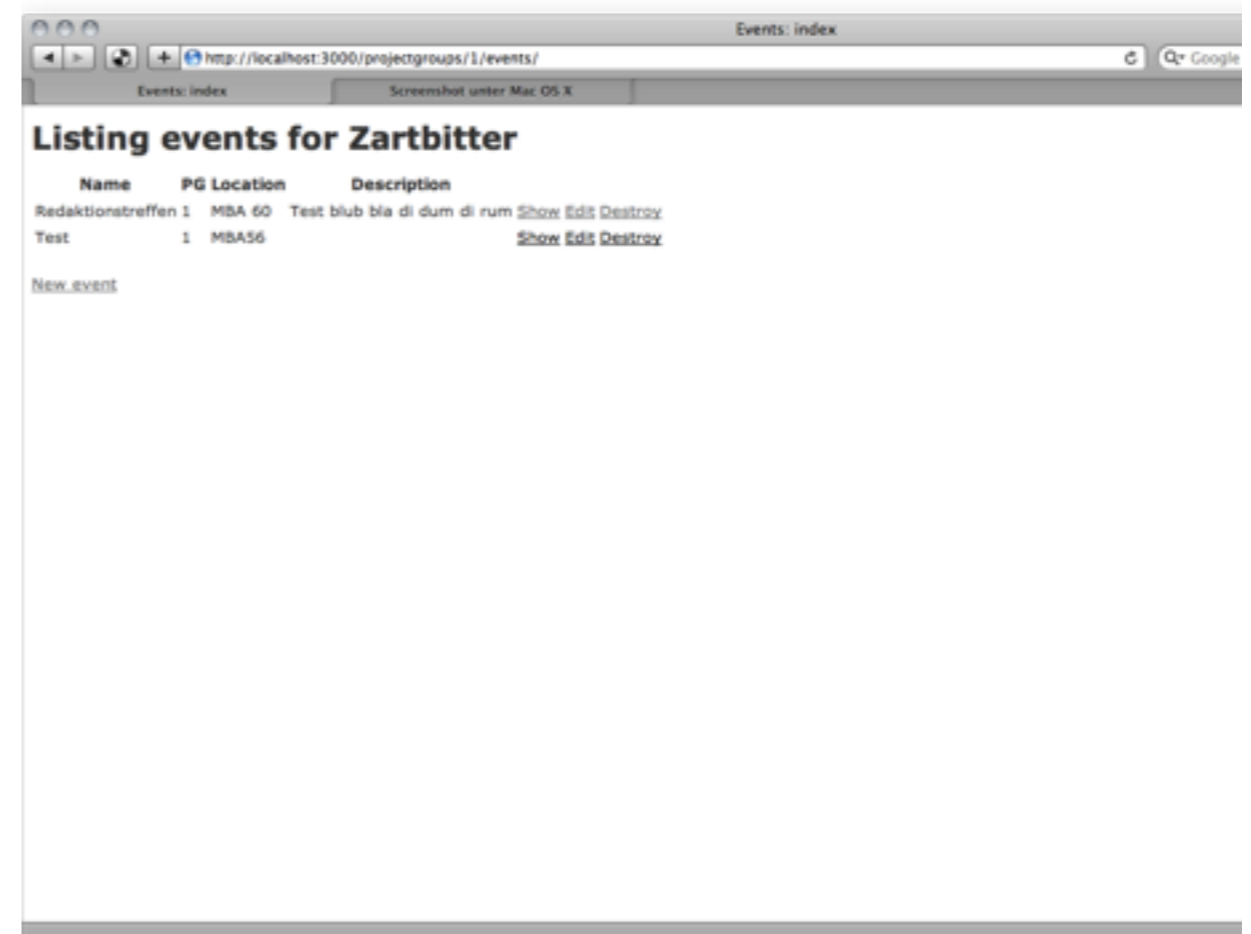

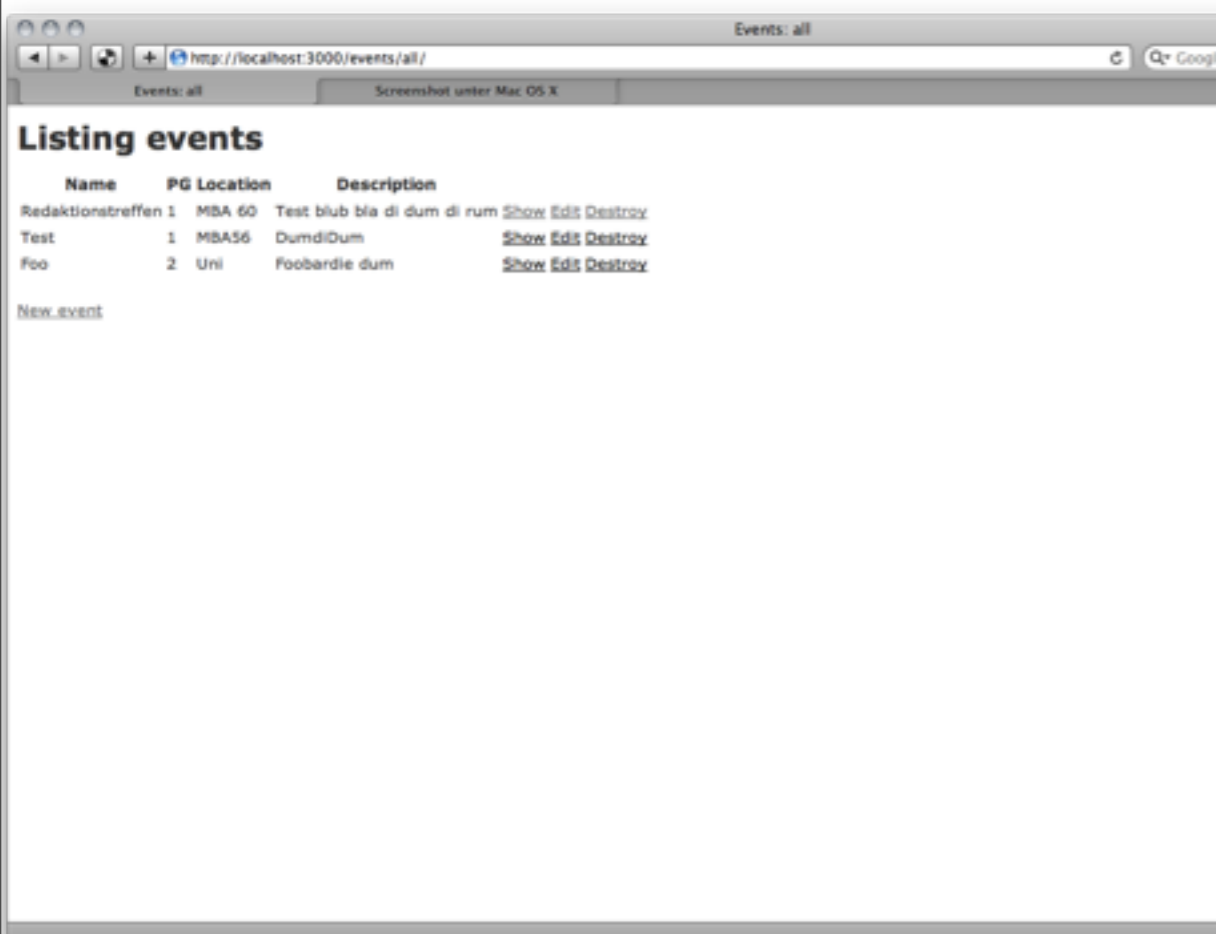

Afterwards I tested different CMS (Adva-cms, Radiant and Comatose) I will probably use Adva-CMS and "rewrite" the backend to fit to my need / extend it. (Adva-CMS is lightweight and therefore easy to extend)

Furthermore I tried different authentication plugins like OpenID and a CAS server because I have to support different locations.
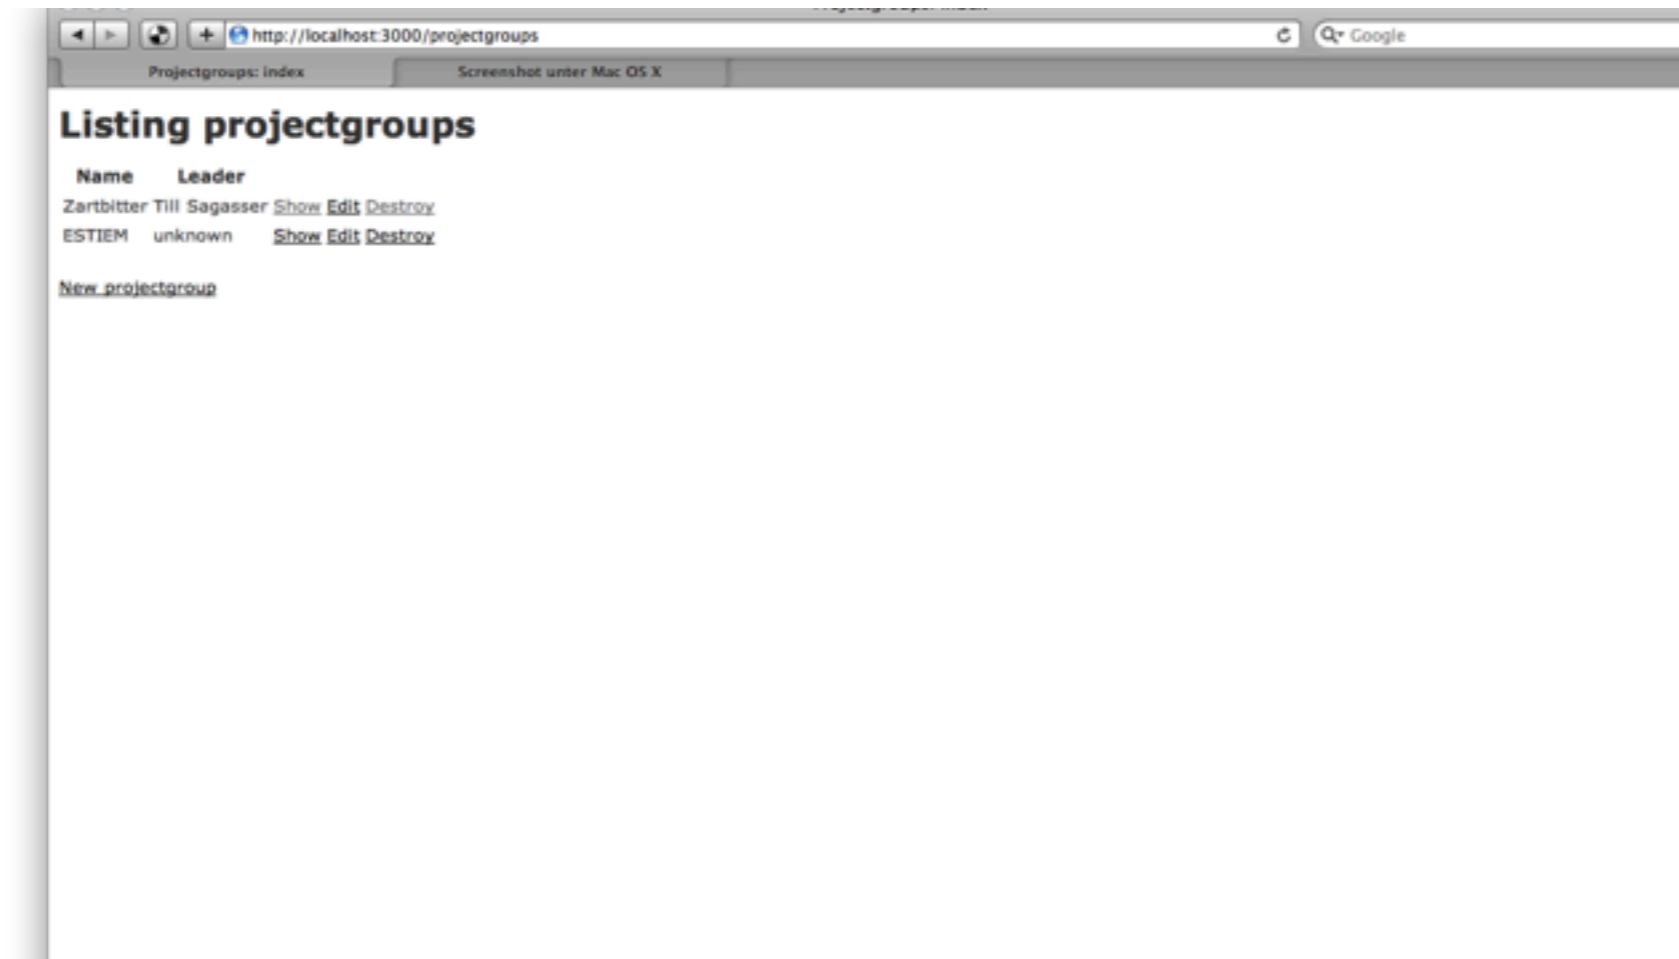

Both try-outs do not produce "interesting" screenshots or applications so I started 5 days ago with the event part of my application.

Facebook Connection integrated

Events can be listed and edited differently.
Right now I am working at the registration for an event

Projectgroups can be listed and edited

Resume

There is still a lot to do but I think I will make this week more progress.

A question would be in what way I can use an existing CMS (Adva-CMS)? Can I fully use it and how does it influence my grade?
